AIRCRAFT ACCESS PLATFORMS

## Nose Docks | Tail Docks | Wing Stands | Door Stands | Shoring | Tooling

The **ModTruss** product line has proven to provide a strong return on investment to MROs and Manufacturers:

### Reconfigurability / Reuse

With **ModTruss**, your structure is never obsolete. Eliminate the “bone yards” of decommissioned stands not being used.

If the air frame changes, just unbolt and reconfigure your stand.

A last-minute request or unforeseen change in design is no problem as you can easily alter your stand.

### Faster Lead Times

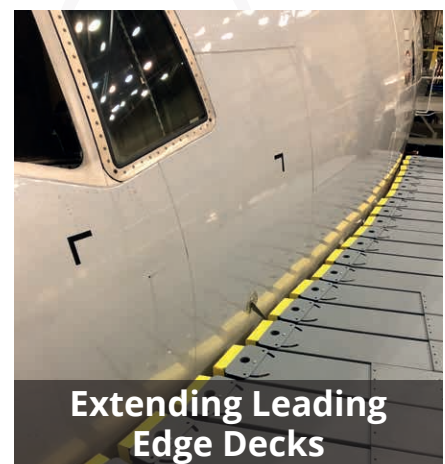

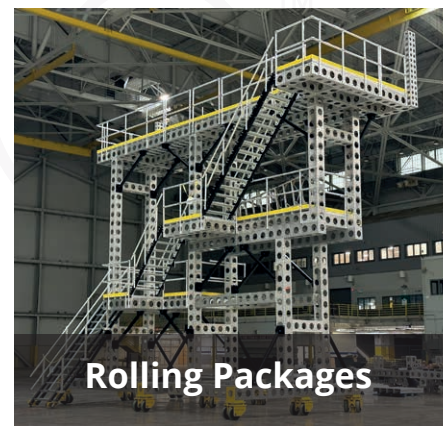

The **ModTruss** Components are pre-engineered resulting in faster design time.

The products of the **ModTruss** Line are off the shelf standardized components that can be shipped quickly.

### Shipping

**ModTruss** structures are assembled on site allowing for easier and more efficient shipping methods.

Product can be shipped to remote locations to service an Aircraft on Ground (AOG).

## No Welding

Mod**Truss** uses 100% bolted connections. This eliminates welding on site and the need for Hot Work permits.

## Cable Management

The design of the Mod**Truss** trussing allows for integrating air, hydraulic, electrical lines, etc., cleanly into the structure.

## “Recovered Space”

Mod**Truss** beams have long spanning capabilities resulting in less columns/bracing and thus providing wide open usable space under the stands- we term this “recovered space”.

Hangar space is often at a premium and this new found “recovered space” is a valuable resource.

## Unlimited Designs

At Mod**Truss** we design specifically to the clients needs and desires. Mod**Truss** structures are not single design, single purpose. The Mod**Truss** team will meet with the client, design with the client, and tailor the stand to their specific requests.

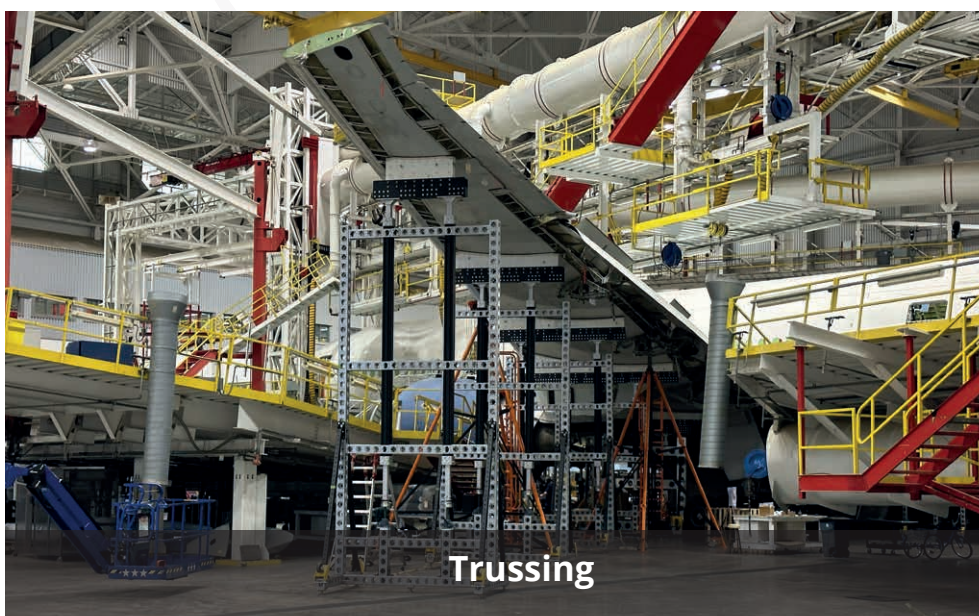

## Resale

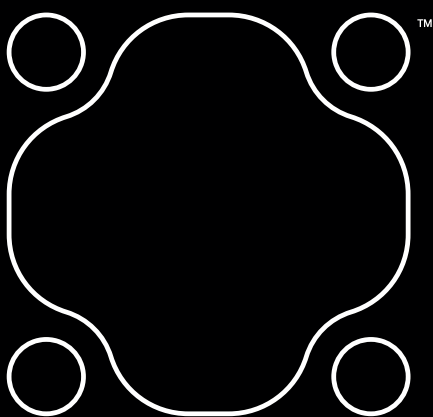

If for whatever reason a Mod**Truss** structure is no longer needed, simply disassemble the stand into the individual components for resale.

Mod**Truss** doesn't just build—it builds value. Our systems retain strong resale value across industries, from Aerospace to wherever innovation is needed.
