Developed by Mayo Clinic doctors and backed by research: Plated is a breakthrough in exosome skincare. Exosomes are tiny vesicles released by cells to communicate with each other. They carry proteins, RNA, growth factors and other molecules into skin cells. Unlike exosomes from other sources, platelet-derived exosomes are cell-free and DNA-free, making them a safe and stable option.

Plated Intense targets fine lines, redness, and discoloration for healthier, younger-looking skin

Plated Hair supports scalp health and fuller, stronger hair.
